

**If we could make desert full of plant,  
the future earth would become the followings.**

**By M. Somei**

- 1. Outbreak of yellow sand stops.**
- 2. The surface temperature of desert drops. The desert calls for clouds.  
Rain falls come back to desert. The glacier retreat is restored.**
- 3. Sea rise stops. A country sinking into the sea stops sinking.**
- 4. Heavy rain and abnormal weather disappears.**
- 5. Grasses and plants absorbs CO<sub>2</sub> → Global warming stops.**
- 6. Plants generate oxygen → Formation of stratospheric ozone layer:  
recovery of ozone hole → Return the earth environment to friendly  
and suitable for creatures.**
- 7. Desert becomes a food base. It can supply grains, vegetables, and fruit.**
- 8. Sustainable production of clothes raw materials (hemp, cotton),  
Chinese medicine resources, natural dye, etc. and revival of tropical  
rain forest.**

**Full of Good Things**
